

# QUALITY & ENVIROMENTAL POLICY

**Falkvarv AB**, located on the Swedish west coast between the Öresund region and Gothenburg, is a shipyard company characterized by high technical competence and solid, long-term experience.

Falkvarv's current focus is a direct reflection of the demands and wishes of our customers, and it is our ambition to continue developing in close cooperation with them.

We aim to be the obvious choice and a fully qualified partner for our customers regarding repair, maintenance, and reconstruction.

It is important that we consider our environmental impact, both locally and globally, in our daily and strategic decisions.

By maintaining, repairing, and servicing vessels, we contribute to a more sustainable environment.

Through our quality and environmental management system, we work with continuous improvements to enhance and develop our services, while also reducing and preventing pollution and environmental damage.

Our goals and actions are outlined in our internal strategic documents.

To succeed in this, the following applies:

- Our work meets or exceeds our customers' requirements and expectations.
- Any customer complaints are handled promptly and in a way that prevents future issues.
- We maintain open and good communication with our customers and suppliers.
- We meet deadlines.
- We maintain high technical competence by educating our employees.
- We provide a safe workplace.
- We strive to minimize air and water pollution.
- We aim to minimize the environmental impact of energy use and transport.
- To ensure responsible chemical management.
- Increase environmental awareness among our staff through education and encourage personal responsibility and contributions to environmental improvements at work.
- Influence our customers, suppliers, and subcontractors to actively work towards reducing our collective environmental impact.
- We comply with applicable legislation, consider it as a minimum requirement, and strive to always be one step ahead.
